

Prof. Albert Eschenmoser Emeritus Professor

Most important awards, prizes and academies

Awards: Benoist Prize, Swiss Gov. (1973); Welch Award, R.A. Welch Foundation, Houston, TX (1974); Cope Award, Amer. Chem. Soc. (1984); Wolf Prize in Chemistry, Israel Gov. (1986); Paracelsus Prize, Swiss Chem. Soc. **Academies:** Akademie der Naturforscher Leopoldina, Halle, Germany; Pontifical Academy of Sciences; Academia Europaea; American Academy of Arts and Sciences, Boston, MA; National Academy of Sciences, Washington, DC; Royal Society, London; Akademie der Wissenschaften, Göttingen, Germany; Croatian Academy of Arts and Sciences. Ordre 'Pour le mérite', Berlin, Germany; Österreichisches Ehrenzeichen für Wissenschaft und Kunst, Wien, Austria.

Summary of scientific research

A. Reaction mechanism and reaction stereochemistry: Early experimental and theoretical studies relevant to terpene biosynthesis on the course and stereochemistry of acid-catalyzed cyclizations of terpenoid polyenes (biogenetic isoprene rule, together with L. Ruzicka, 1953); the stereochemical interpretation of the biogenetic isoprene rule, together with D. Arigoni and L. Ruzicka (1955); the experimental demonstration of strain release control of the oxidation of alcohols with chromic acid (1955) and of stereoelectronic control of SN₂- reactions (1970); experimental and theoretical studies on nitrogen inversion (1969). **B. Chemical synthesis:**

development of new reactions and reagents: Introduction of heterocyclic fragmentation reactions into organic synthesis (1952); epoxy-ketone -> alkinone-fragmentation (1967); amide acetal version of Claisen rearrangement (1969); methods for making C, C-bonds: enamino-iminoester condensations (1964), sulfide-contractions (1968), dimethyl-methyldene-iminium iodide (1971) and α -Chloro-nitrene reactions (1972). *C. Chemical synthesis:* synthesis of complex natural products and related structures: Synthesis of the alkaloid of the autumn crocus, Colchicin (1959); synthetic routes to corrins (1964, 1969); synthesis of vitamin B12 (collaboratively with R.B. Woodward) (1972); synthetic studies related to the problem of vitamin B12 biosynthesis (1980). *D. Contemporary studies:* Chemical etiology of nucleic acid structure; experimental and theoretical studies relevant to the problem of designing chemical models of biogenesis.
