

Prof. Antonio García-Bellido Professor

Most important awards, prizes and academies

Awards: Príncipe de Asturias de Investigación Científica, Spain (1984); Leopold Mayer de l'Academie des Sciences de Paris, France (1986); Santiago Ramón y Cajal National Prize for Scientific Research, Spain (1995); Severo Ochoa Chair in Biology, Section: Research abroad, Spain (1996); Comunidad Autónoma de Madrid Research Prize, Spain (1998); Rey Jaime I Research Medal, Valencia, Spain (1998); Encomienda con Placa de la Orden Civil de Alfonso X el Sabio (2005); Premio México de Ciencia y Tecnología (2006). *Academies:* Real Academia de Ciencias Exactas Fisicas y Naturales, Spain (1984); Foreign Member, American Academy of Arts and Sciences, USA (1985); Foreign Member, Royal Society, London (1986); Foreign Member, Nat. Acad. of Sciences USA, Washington, DC (1987); Founder Member, Academia Europaea (1988); Foreign Member, Nat. Acad. of Sciences of France (1995); European Academy of Sciences (2004). *Honorary Degrees:* Academy of Sciences USSR, Moscow (1990); University of La Coruña, Spain (1996); University of Barcelona, Spain (1996); University of Oviedo, Spain (1997); University of Salamanca, Spain (1998); University of Elche, Alicante, Spain (2001).

Summary of scientific research

The work of Antonio García-Bellido has been pioneer and prevalent in exploring an 'apogenetic' notion of Development: the genome, active in the individual cells, determines specific cell

behaviour and this, in turn, the organization of cells in supracellular systems. The wealth of new ideas contributed by Antonio García-Bellido in the field of Developmental Biology is related with his outstanding experimental results in the studies of the genetic bases of cell recognition (1966-69); genetic mosaics and blastoderm maps (1968); clonal analysis of developing systems (1968-73) that lead him to the discovery of developmental compartments and the theory of selector genes; somatic cell genetics (1970-76); genetic trans-regulation and syntagmas (1972-82); cell-cell interactions in Morphogenesis (1984-). Venation and cell proliferation control (1989-). His ideas and new approaches to the problem of Development have been followed and continued by numerous researchers all over the world mainly in Europe and the United States of America, prompting similar research studies in other animal groups, such as mammals, and plants. The present flourishing of the Molecular Genetics of Development in *Drosophila* is due, in a large extent, to the important work of Antonio García-Bellido that is already quoted and explained in text books (e.g. Genetics, Strickberger, Molecular Biology of the Cell, B. Alberts et al.). Some of his papers have been qualified as 'citation classics' by Current Contents and commented and praised by many colleagues in research papers, review articles and dedications of books.
